AnGes MG, Inc.

AnGes Receives an Award at Society of Cerebral-Cardio-Vascular Anti-Aging 2012 for the Development of Functional Peptide with Anti-aging effects and Antimicrobial Activity

AnGes MG Inc. ("AnGes") is pleased to announce that the company was awarded at Society of Cerebral-Cardio-Vascular Anti-Aging (CCVAA) 2012 ("Forefront and the Future of Anti-Aging Medical Science") for its report regarding "the development of functional peptide with anti-aging effects and antimicrobial activity."

The purpose of the CCVAA 2012 is to promote interdisciplinary discussions on "the forefront and the future of anti-aging medical science" and to stimulate practical utilization of the results obtained in fundamental studies and clinical researches of anti-aging related subjects in cerebral-cardio-vascular areas.

AnGes found new actions of COSMEPEPTIN[®], the functional peptide in which anti-aging effects and antimicrobial activity had been found in previous researches. It became evident that it also had antioxidative action and hair growth promoting action (proliferative activity of hair follicle papilla cells). Backed by the various anti-aging effects, AnGes is considering the utilization of COSMEPEPTIN[®] in new types of cosmetic and healthcare products.

Ei Yamada, President and CEO of AnGes, commented "I must express my appreciation to CCVAA, I believe the award means that CCVAA acknowledges and has a high expectation for our fundamental researches. We are committed to continue further researches of COSMEPEPTIN[®] with the aim of commercialization."

This trend will have no effect on the business performance for the fiscal year of 2012.
